

RDMS PROJECT REPORT

Rural Development Management System
May 2026

1. PROJECT OVERVIEW

The Rural Development Management System (RDMS) is a comprehensive web-based application designed for Umeed-e-Sahar Foundation to digitize and streamline rural welfare operations. The system provides a centralized platform for managing beneficiaries, donors, projects, aid distribution, and volunteer activities.

2. OBJECTIVES

- Eliminate scattered paper-based records and spreadsheets
- Centralize beneficiary and donor information management
- Automate donation and aid distribution tracking
- Provide real-time analytics and reporting capabilities
- Implement secure role-based access control
- Ensure data integrity through relational database design

3. TECHNOLOGY STACK

Frontend:

HTML5, CSS3

Backend:

PHP 8.x

Database:

MySQL

Server:

Apache (XAMPP)

Tool:

phpMyAdmin

4. CORE MODULES

- Dashboard - Real-time system metrics and overview
- Beneficiary Management - Complete demographic and aid history tracking
- Donor Management - Registration and contribution tracking
- Donation Recording - Transaction logging and allocation
- Project Management - Budget and progress monitoring
- Aid Distribution - Distribution records and receipt generation
- Volunteer Management - Registration and activity tracking
- Reports & Analytics - Comprehensive reporting and export capabilities

5. DATABASE ARCHITECTURE

The system implements a fully normalized relational database (3NF) with the following entities:

- Users
- Beneficiaries
- Donors

- Donations
- Projects
- Aid Distribution
- Volunteers

6. USER ROLES & ACCESS CONTROL

Admin: Full system access including user management and configuration

Manager: Data entry, report viewing, and project oversight

Field Worker: Beneficiary data entry and aid distribution logging

7. FEATURES & FUNCTIONALITY

- Secure session-based authentication with automatic timeout
- CRUD operations across all modules
- Data validation and integrity constraints
- Comprehensive error handling
- User-friendly responsive interface
- Detailed audit trails and activity logging
- Advanced reporting and analytics
- Data export capabilities (PDF, Excel)

8. IMPLEMENTATION STATUS

- ' Database design and normalization completed
- ' Core application modules developed
- ' Authentication system implemented
- ' All major features functional
- ' Testing and validation completed

9. CONCLUSION

The RDMS provides a professional, scalable solution for managing rural development operations. The system successfully integrates database management concepts with practical organizational workflows, providing Umeed-e-Sahar Foundation with a powerful tool for improved operational efficiency and transparency.
